We have been nominated and shortlisted for the Impact Bett Educational 2018 for the project some of our Year 8 pupils did on E-Safety in ICT lessons using Green Screen Technology supported by Gaia Technologies.

Year 8 ventured on green screen journey of discovery to learn and spread the word about E-Safety. Armed with research we collaborated real time with Gaia Technologies to investigate and innovate using this exciting technology to engage, inform and educate our peers. The enjoyment was palatable and the real time connection with Gaia was inspiring. With each lesson engagement increased and excitement grew about seeing their project come to life. With a variety of abilities each learner was given the opportunity to excel at their strength and the dynamics shifted with strong leaders and creative genius coming to life. The showcase was a triumph with teachers, leaders, learners, parents all coming together to celebrate their progress. The impact of this project is multifaceted; inspiring young people about careers, engaging real time with I.T experts, adding value to their learning outcomes, sharing the word about E-Safety, changing the traditional way we learn and realising that making mistakes is often the best way to learn. Alongside this we had a girls computing club aimed at empowering girls hosted over Skye live from Gaia Technologies HQ guiding us in 3D animation software.
